## REAR-POST Bulk Bag Filler with Roller Conveyor

Flexicon's REAR-POST bulk bag filler with cantilevered fill head is offered with performance options including a roller conveyor; inflator to expand the bag prior to filling, automated vibratory densification/deaeration system to stabilize the bag, and material delivery system integrated with the user's process equipment or bulk storage vessels.

The unit features a cantilevered fill head with powered fill head height adjustment that accommodates all popular bag sizes, pneumatically retractable bag hooks, an inflatable connector to seal the bag inlet spout, and a feed chute vent for dust-free air displacement during filling.

It is also offered with Flexicon's own flexible screw conveyor delivery system integrated with the user's upstream process equipment or other material source. The conveyor delivers a full range of free- and non-free-flowing materials and blended products with the consistency and capacity needed for rapid bag filling, and the steady dribble-feed rates required for accurate weighments.

Flexicon offers two configurations of REAR-POST fillers: with filler mounted on load cells to measure weight gain of the entire bulk bag filler; and with weigh hoppers suspended above the filler, allowing higher filling rates through simultaneous recharging of the hopper and replacement of the bag.

The company also offers patented TWIN-CENTERPOST™ bulk bag fillers for low volume, low cost filling applications, and patent-pending SWING-DOWN® bulk bag fillers that lower the fill head and pivot it to the operator for connecting of empty bulk bags at floor level.

All system components are available constructed to industrial, food, dairy and pharmaceutical standards.

*Powered fill head height adjustment accommodates bulk bags of all popular sizes*
