

Globally Recognized Bulk Material Handling Solutions, Delivered with Local Expertise

Flexicon Corporation is your ideal partner to efficiently scale production to meet surging demand and evolving requirements.

From individual components to fully automated, plant-wide systems, designed for high-efficiency handling of free- or non-free-flowing materials, all backed by our exclusive Lifetime Performance Guarantee.

All Flexicon Systems and Components are Backed by our Exclusive LIFETIME PERFORMANCE GUARANTEE

- 50+ Years of Experience
- 27,000+ Installations
- 4 Global Manufacturing Facilities
- 1,600+ Materials Handled
- Full-Scale Lab Testing

Flexible Screw Conveyors

The versatile design allows for horizontal, vertical, or inclined configurations, with the ability to navigate around obstacles.

Pneumatic Conveyors

Transport bulk materials through enclosed pipelines using air or gas streams, effectively moving powders, granules, and small particles.

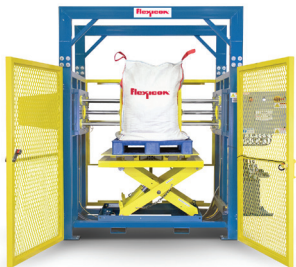

Tubular Cable Conveyors

This enclosed system offers gentle handling to prevent product degradation, flexible routing and dust-free operation.

Bulk Bag Dischargers

Provide dust-free loading, untying, retying, and removal of bulk bags. Available in a range of configurations.

Bulk Bag Conditioners

Loosens hygroscopic materials such as chemicals, food products, moisture-sensitive powders, and other bulk materials that have solidified.

Bulk Bag Filling Systems

From simple stand-alone fillers to complete bulk bag filling lines including roller conveyors, pallet dispensers, and advanced automation controls.

Bag Dump Stations

Engineered to efficiently capture dust generated during the manual unloading of powders and bulk solids from a range of bags and containers.

Drum/Box/Container Dumpers

Provide safe, efficient, and dust-free unloading of bulk materials from drums, boxes, and other containers.

Growth-Ready Production Equipment Paired with Automation and Controls

Built Around *Your Space and Your Process.*

Our engineering team designs and manufactures integrated bulk handling systems based on your specific production and spatial requirements. Solutions include automated weigh batching, precise bulk bag filling, and modular configurations for easy adaptation. As your single-source provider, we combine equipment selection, automation, and system integration to maximize productivity while minimizing operational changes.

Engineered to *Your Specs. Programmed to Succeed.*

Our Controls and Automation Department combines advanced control technologies and full-scale fabrication expertise to engineer, fabricate, test, and support customizable control packages. Flexicon also delivers solutions that integrate with your existing machinery (including third-party mixers and packaging lines) to create a unified workflow, minimizing downtime and supporting future growth.

Countless Configurations for **Any Equipment Need**

Have a bulk material handling challenge
requiring something more unique?
We can help.

Full-Scale Testing Guarantees Performance.

Flexicon's full-scale Test Lab is engineered to replicate every critical aspect of your bulk material handling application. Our facilities allow you to validate conveying capacities, assess product degradation, confirm material flowability, evaluate dust containment, and optimize other process variables under real-world conditions. With the exception of materials posing serious hazards, most dry bulk solids can be tested at full scale using our complete lineup of Flexicon equipment.

Your team is welcome to visit and observe testing firsthand, but an on-site visit is not required to benefit from a comprehensive system evaluation. Whether attending in person or remotely, you will receive detailed test reports and video documentation, enabling you to refine your system design with confidence before finalizing your equipment purchase.

Bulk material solutions for *any* project.

Partner with Flexicon to transform challenges into opportunities for competitive advantage.
